

Faces of COVID

When I sat down in the chair and talked to the nurse who would administer the COVID-19 vaccine to me, I felt a sense of peace.

Having had the COVID-19 virus back in November of 2020, one would think that I would have made the decision to get vaccinated a bit earlier. But, the truth is, I was uneducated, unmotivated, and just ignorant to the effects of the vaccine. I allowed myself to be swayed by uneducated opinions that were not supported by scientific evidence.

However, through much prayer and research, as well as listening to my pastor encourage others to get the vaccine, I decided that it was time for me to listen to God's voice. Plus, I've received immunizations before, and the reason why I have never had chickenpox, measles, mumps, or the flu is because my mother and father made sure that my immune system was protected.

This is the best decision that I could've made for myself. I would like to encourage those in my generation and younger to get the vaccine. Read the research that shows scientific evidence that the vaccine is safe, and continue to talk to others about why it is so important to stop the spread of COVID-19.

Thank you,
Alexis
